

Title: Lecture Series presented by KPMG - Quantum Physics in Sixty Minutes

Date: Oct 24, 2009 11:00 AM

URL: <http://pirsa.org/09100074>

Abstract: Quantum Physics. Along with neuroscience and rocket science, it has a reputation of being abstract, impenetrable and horrendously complicated. Even Einstein himself struggled to get his head around it. But, there's hope! Using references from movies, books and art, this presentation will guide you through the quantum world and give an overview of science's best theory of the subatomic world to date. Prepare yourself for a mind-bending journey.

Revolutionary

"If you think you can talk about quantum theory without feeling dizzy, you haven't understood the first thing about it"

—Niels Bohr, Nobel Prize Winner
